CONSIDERATIONS ON THE CHARACTERISTICS OF MASTIC ASPHALT. [1960] [24]p.
Order from SLA mi$2.70, ph$4.80 61-10166

Trans. from Giornale del Genio Civile (Italy) 1957, no. 6.

Results are presented of tests on samples of mastics prepared with bitumens having the same natural origin but a different penetration, and with mineral aggregates of a different type and different granulometry. The characteristics examined on the different mastics were: the cohesiveness, the fragility point at low temperature, the elastic return, the degree of deformation under constant load and the apparent viscosity of the mastics at 160° C. The results show the favorable influence that the long maturation (ripening) undergone through time by natural asphalt has on the technical properties when compared to the reconstituted one. To obtain a mastic with good behavior under working
